

How to fix MediaTek RZ717 drivers in Windows

Download the source of drivers through this link:

<https://www.catalog.update.microsoft.com/Home.aspx>

To find the right driver, you need to get the Matching Device ID from Device Manager.

1. Open Device Manager
2. Expand Network adaptors
3. Right click on the RZ717 WiFi 7 160MHz device and click Properties
4. Click on the Driver tab
5. Select the property Matching device Id from the properties dropdown
6. Right click on the value and click Copy

Search the catalog or this value on the catalog. On my system, this value is [PCI\VEN_14C3&DEV_0717&SUBSYS_071714C3](#).

From the results, click on the Download button, and then on the .cab link. I recommend creating a folder that matches the driver version and placing the file in there.

To install the driver:

1. Double click on the .cab file to open it
2. Copy all of the files inside and paste them in the folder outside
3. In Device Manager, right click on the device
4. Click Update Driver
5. Click Browse my computer for drivers
6. Browse to the folder that you created
7. Click next
8. Restart if prompted
